How to Use This Guide

Complete documentation for the wireless LAN product family is provided on webpages at [Wireless LAN Services \(WLS\) Product Documentation](#).

This guide, *WLA532 Access Point Hardware Documentation*, helps you install the WLA532 wireless LAN access point in a Juniper Networks wireless LAN (WLAN).

List of Wireless LAN Software Guides for Release 7.6

Title	Description
<i>Mobility System Software Command Reference Guide</i>	Functional and alphabetic reference to all MSS commands supported on the controllers and access points
<i>Mobility System Software Configuration Guide</i>	Basic instructions for configuring and managing the system through the MSS CLI
<i>Mobility System Software Quick Start Guide</i>	Instructions for performing basic setup of secure (802.1X) and guest (Web AAA) access, for configuring a Mobility Domain for roaming, and for accessing a sample network plan in RingMaster for advanced configuration and management
<i>Mobility System Software Release Notes</i>	What's new, version compatibility, licensing, supported platforms, upgrade and downgrade information, and caveat information for Mobility System Software (MSS).
<i>RingMaster Configuration Guide</i>	Instructions for configuring wireless services as well as wireless LAN controller appliances and access points on a WLAN. Read this guide to learn how to deploy a WLAN network.
<i>RingMaster Monitoring and Management Guide</i>	You can manage the entire WLAN with the RingMaster tool suite. Read this guide to learn how to optimize and manage your WLAN.

Title	Description
<i>RingMaster Planning Guide</i>	Instructions for planning wireless services. Read this guide to learn how to configure a WLAN network.
<i>RingMaster Quick Start Guide</i>	Quick start guide to get started with RingMaster.
<i>RingMaster Release Notes</i>	Version compatibility, licensing, supported platforms, upgrade and downgrade information, and caveat information for RingMaster.

Documentation Symbols Key

Notice Icons		
Icon	Meaning	Description
	Informational note	Indicates important features or instructions.
	Caution	Indicates a situation that might result in loss of data or hardware damage.
	Warning	Alerts you to the risk of personal injury or death.
	Laser warning	Alerts you to the risk of personal injury from a laser.

Documentation Feedback

We encourage you to provide feedback, comments, and suggestions so that we can improve the documentation. Send e-mail to techpubs-comments@juniper.net with the following:

- Document URL or title
- Page number if applicable
- Software version
- Your name and company

Requesting Technical Support

Technical product support is available through the Juniper Networks Technical Assistance Center (JTAC). If you are a customer with an active J-Care or JNASC support contract,

or are covered under warranty, and need post-sales technical support, you can access our tools and resources online or open a case with JTAC.

- JTAC policies—For a complete understanding of our JTAC procedures and policies, review the *JTAC User Guide* located at <http://www.juniper.net/us/en/local/pdf/resource-guides/7100059-en.pdf> .
- Product warranties—For product warranty information, visit <http://www.juniper.net/support/warranty/> .
- JTAC hours of operation—The JTAC centers have resources available 24 hours a day, 7 days a week, 365 days a year.

Self-Help Online Tools and Resources

For quick and easy problem resolution, Juniper Networks has designed an online self-service portal called the Customer Support Center (CSC) that provides you with the following features:

- Find CSC offerings: <http://www.juniper.net/customers/support/>
- Search for known bugs: <http://www2.juniper.net/kb/>
- Find product documentation: <http://www.juniper.net/techpubs/>
- Find solutions and answer questions using our Knowledge Base: <http://kb.juniper.net/>
- Download the latest versions of software and review release notes: <http://www.juniper.net/customers/csc/software/>
- Search technical bulletins for relevant hardware and software notifications: <https://www.juniper.net/alerts/>
- Join and participate in the Juniper Networks Community Forum: <http://www.juniper.net/company/communities/>
- Open a case online in the CSC Case Management tool: <http://www.juniper.net/cm/>

To verify service entitlement by product serial number, use our Serial Number Entitlement (SNE) Tool: <https://tools.juniper.net/SerialNumberEntitlementSearch/>

Opening a Case with JTAC

You can open a case with JTAC on the Web or by telephone.

- Use the Case Management tool in the CSC at <http://www.juniper.net/cm/> .
- Call 1-888-314-JTAC (1-888-314-5822 toll-free in the USA, Canada, and Mexico).

For international or direct-dial options in countries without toll-free numbers, see <http://www.juniper.net/support/requesting-support.html> .

WLA532 Access Point Hardware Overview

The Juniper Networks Wireless LAN Access Point, WLA532 is an indoor mobility access point that provides enterprise customers, such as those in business, healthcare and education, with 802.11n based wireless LAN access in high density deployments. The device is a compact, hexagon-shaped access point (see [Figure 1 on page 3](#)) with dual radios with multiple input multiple output (MIMO) supporting up to three spatial streams on each radio.

Figure 1: WLA532 Access Point

NOTE: The WLA532 access point requires only hardware installation. All configurations for the access point are done on the wireless LAN controllers (WLCs).

You configure the access point with the Juniper Networks WLC Series Wireless LAN Controllers, through the Juniper Networks RingMaster graphical user interface or the Juniper Networks Mobility System Software (MSS) CLI.

This topic covers:

- [Features Supported by the WLA532 Access Point on page 4](#)
- [Physical Characteristics of the Access Point on page 4](#)
- [Software and Hardware Used with the Access Point on page 4](#)

Features Supported by the WLA532 Access Point

Features supported by the access point include:

- Up to 450 Mbps transmission—WLA532 3x3 spatial stream access point can support data rates of up to 450-Mbps in a 5-GHz band with 40-MHz channel bonding and a short-guard interval. On a 2.4-GHz band with 20-MHz channel width, the access point supports up to 195-Mbps by default with standard guard-interval and supports up to 216.7-Mbps with short guard-interval.
- In-band spectrum monitoring and network spectrum mitigation—The access point supplies in-band RF-detect functionality to include spectrum analysis to detect and classify the non-IEEE 802.11 sources of interference.
- Rate adaptation feature with 3 spatial stream (SS) rates, 2 spatial stream rates and 1 spatial stream rates—The access point supports 3 SS, 2 SS and 1 SS rates and provides and full support for rate adaptation with 3 SS clients.

Physical Characteristics of the Access Point

Physical characteristics of the access point include:

- One 2.4 GHz radio—One 2.4-GHz IEEE 802.11n radio that supports 3x3 spatial streams and is backward compatible with 2 SS and 1 SS radios.
- One 5 GHz radio—One 5-GHz IEEE 802.11n radio that supports 3x3 spatial streams and is backward compatible with 2 SS and 1 SS radios.
- One 10/100/1000Base-T Gigabit Ethernet port—One 10/100/1000BASE T auto-sensing Gigabit Ethernet port with an RJ 45 connector to connect the access point to a wireless LAN controller or switch.
- Power over Ethernet (PoE) on the Gigabit Ethernet port—Power consumption within IEEE standard 802.3af power on the Gigabit Ethernet port. This feature reduces power consumption.

Software and Hardware Used with the Access Point

Use the following software (from Juniper Networks) to configure and operate the access point:

- RingMaster GUI—RingMaster to configure and monitor the access point
- Mobility System Software (MSS) CLI—MSS to configure the access point.

For more information, see the RingMaster and MSS guides at: [RingMaster and MSS Guides](#).

Use the following hardware from Juniper Networks to connect the access point and make it operational:

- WLC2 Wireless LAN Controller
- WLC200 Wireless LAN Controller
- WLC216 Wireless LAN Controller
- WLC8 Wireless LAN Controller
- WLC800 Wireless LAN Controller
- WLC880 Wireless LAN Controller
- WLC2800 Wireless LAN Controller

The WLA532 access point can be powered up and operational within 3 minutes and supports all features of RingMaster and Mobility System Software (MSS).

MAC Address Information for WLA Series Access Points

Each WLA Series access point is assigned a unique block of 64 MAC addresses. Each radio has 32 MAC addresses and supports up to 32 service set identifiers (SSIDs), with one MAC address assigned to each SSID as a basic service set identification (BSSID). The access point MAC address block is listed on a label on the back of the access point.

If the access point is already deployed and running on the network, you can display MAC address assignments by using the **show ap status** command in the Mobility System Software CLI.

All MAC addresses for an access point are assigned based on the base MAC address of the access point as described in [Table 1 on page 5](#).

Table 1: MAC Address Information for WLA Series Access Points

MAC Address Type	Description
Access point base MAC address	The access point has a base MAC address. All other addresses are assigned based on this address
Ethernet port MAC addresses	<ul style="list-style-type: none"> • The MAC address of Ethernet port 1 is the same as the access point base MAC address • The MAC address of Ethernet port 2, if there is an Ethernet port 2 on the access point, is the same as the access point base MAC address + 1. (Not applicable to the WLA532 access point)

Table 1: MAC Address Information for WLA Series Access Points (*continued*)

MAC Address Type	Description
5-GHz radio and SSID MAC addresses	<ul style="list-style-type: none"> The MAC address of the 5-GHz radio is the same as the access point base MAC address + 1 The BSSIDs for the SSIDs configured on the 5-GHz radio end in odd numbers. The first BSSID is equal to the access point base MAC address + 1. The next BSSID is equal to the access point base MAC address + 3, and so on
2.4-GHz radio and SSID MAC addresses	<ul style="list-style-type: none"> The MAC address of the 2.4-GHz radio equals the access point base MAC address The BSSIDs for the SSIDs configured on the 2.4-GHz radio end in even numbers. The first BSSID is equal to the access point base MAC address. The next BSSID is equal to the access point base MAC address + 2, and so on

Status LEDs on WLA532 Access Points

The WLA532 access point has two status LEDs that glow in green and yellow colors to indicate the status of the access point, see [Figure 2 on page 6](#).

Figure 2: Status LEDs on WLA532 Access Points

[Table 2 on page 7](#) describes the status LEDs.

Table 2: Status LEDs on WLA532 Access Points

Label	Color	Status and Description
STAT	Green, solid	On steadily when the: <ul style="list-style-type: none"> Access point has booted and received a valid configuration Management link with a wireless LAN controller (WLC) is operational One or both radios are enabled or are in sentry mode
	Yellow, solid	The access point is waiting to receive boot instructions and a configuration file from a controller or switch
	Green and yellow, alternating	The access point is booting and is receiving a configuration file from a controller, or a switch, or is waiting for a radio to be enabled or placed in sentry mode
Radios (11 AN and 11 BGN)	Green, solid	A client is associated with the radio
	Green, flashing	Associated client is sending or receiving traffic
	Yellow, flashing	Nonassociated client is sending or receiving traffic
	Green and yellow, alternating	Radio is unable to transmit data; the problem can occur due to any of the following: <ul style="list-style-type: none"> Excessive interference is preventing the sending of beacons The radio has failed
	Yellow, solid	Radio is disabled or is in sentry mode
	Unlit	No radio is present, or if a radio is present and enabled, no clients are associated with the radio and there is no traffic

Ethernet Ports and Connectors

- [Ethernet Connections for WLA532 Access Points on page 9](#)
- [PoE Information for WLA532 Access Points on page 9](#)

Ethernet Connections for WLA532 Access Points

You use the RJ-45 network port on the WLA532 access point to connect the access point to a wireless LAN controller (WLC) or to a switch in the network. The access point receives power and data through the RJ-45 port.

The port provides a 10/100/1000 autosensing (MDI/MDX) Gigabit Ethernet connection. You configure the connection either as a direct connection or as an indirect connection through an intermediate Layer 2 or Layer 3 network. You use a Category 5 cable with straight-through signaling and standard RJ-45 connectors to connect the access point to a controller or to a Juniper Networks switch in the network.

The access point uses only Power over Ethernet (PoE) IEEE 802.3af. It can also receive PoE power from PoE-capable switches or other Juniper Networks switches that support PoE.

NOTE: The access points do not support daisy-chain configurations. Do not connect one access point to another access point.

Related Documentation

- [Connecting the Access Point to Wireless LAN Controllers on page 48](#)
- [PoE Information for WLA532 Access Points on page 9](#)

PoE Information for WLA532 Access Points

The WLA532 access point operates as a powered device within standard IEEE 802.3af Power over Ethernet (PoE) from either mid-span or end-span power source equipment. It also operates on IEEE 802.3af+ (54 V from power source equipment) or IEEE 802.3at (PoE+). It responds to IEEE 802.3at discovery as an IEEE 802.3af class 3 device. The access point operates below IEEE 802.3af standard PoE power.

- Related Documentation**
- [Ethernet Connections for WLA532 Access Points on page 9](#)

CHAPTER 3

Technical and Mechanical Specifications

- Technical, Physical, and Radio Specifications for WLA532 Access Points on page 11

Technical, Physical, and Radio Specifications for WLA532 Access Points

This topic lists the technical, mechanical, and compliance specifications for WLA532 access points.

NOTE: For detailed compliance information, see the *Juniper Networks Regulatory Guide* at: <http://www.juniper.net/>.

WARNING: In the USA, install the access point and any externally attached antennae a minimum of 7.9 in. (20 cm) away from people. This safety warning conforms with FCC radio frequency exposure limits for dipole antennae such as those used in the access point.

802.11 a/b/g/n Features

The WLA532 access point supports:

- High-performance 11-Mbps (802.11b), 54-Mbps (802.11a/g), or 450-Mbps (802.11n) data rates
- Wi-Fi, WPA-certificated interoperability
- WFA WMM and WMM power-save UAPSD
- WPA and WPA2 personal or enterprise with TKIP/AES
- EAP methods such as TLS and PEAP
- Either 40-bit/104-bit WEP or 64-bit/128-bit WEP
- Seamless roaming within the IEEE 802.11 a/b/g/n Juniper Networks WLAN infrastructure
- Adjustable output power support
- Single autosensing 10/100/1000BASE-T Gigabit Ethernet port, configured as MDI
- Compliance with IEEE 802.3, 802.3u, and 802.3ab standards

- Gigabit Ethernet Power over Ethernet (PoE) injector support
- IEEE 802.3af PoE compatibility

Ceiling and Wall Mounting

The WLA532 access point can be mounted to a recessed 15/16-in. ceiling-tile rail without disrupting rail or tile alignment. The following mounting adapters are provided with the access point in an auxiliary mounting kit:

- 9/16-in. recessed ceiling-tile-rail adapter
- Wall-mount bracket for offset wall mounting and for providing cable bend radius for easy installation
- North America single junction box adapter (minimum extension from wall, covers wall box and cables)
- European single junction box adapter (minimum extension from wall, covers wall box and cables)

Physical and Compliance Specifications

The mechanical and compliance specifications for the WLA532 access point are listed in [Table 3 on page 12](#).

Table 3: Mechanical and Compliance Specification for WLA532

Specification	Description
Size	Length: 5.71 in. (14.5 cm) Width: 5.37 in. (13.65 cm) Height: 2.11 in. (5.35 cm)
Weight	Without mounting bracket: 13.87 ounces (393.2 grams)
Volume	631 cm ³
Operating temperature	32° F through +122° F (0° C through 50° C)
Storage temperature	-40° F through +158° F (-40° C through +70° C)
Humidity	5% to 95% noncondensing
RoHs/ IEEE	Directive 2002/95/EC, 2006/122/EC China RoHS
Power over Ethernet (PoE)	40 V to 54 V (optimal operational voltage and current in Power over Ethernet entry) IEEE 802.3af
Status indicators	Health/status and radio LEDs (For descriptions of the LEDs, see "Status LEDs on WLA532 Access Points" on page 6).

General	Power-save mode supported
	Transmit power control in 1-dBm increments
	Supports up to 50 clients per radio
	NOTE: This number may vary with the state of RF environment and types of clients.
	Supports Dynamic Frequency Selection

Radio Specifications

The radio specifications for the WLA532 access point are listed in [Table 4 on page 14](#). [Table 5 on page 15](#) and [Table 6 on page 15](#) shows the receive sensitivity numbers for WLA532 access point.

Table 4: Radio Specifications for the WLA532 Access Point

Specification	Description
Antenna type	Integrated diversity omnidirectional
	Internal 3X3 multiple input multiple output (MIMO)
Antenna gain	Internal: 3 dBi (2.4-GHz)
	Internal: 5 dBi (5-GHz)

Table 4: Radio Specifications for the WLA532 Access Point (*continued*)

Specification	Description
Frequency band	2.4-GHz to 5-GHz based on country regulations
Operating channels	Based on the country of operation specified by the system administrator
Association rates	802.11n rates: MCS 0 through MCS 23
Modulation	Orthogonal Frequency Division Multiplexing (OFDM) for IEEE 802.11a/g/n Quadrature Amplitude Modulation (QAM16 and QAM 64) for IEEE 802.11a/g/n Direct-Sequence Spread Spectrum (DSSS) modulation for IEEE 802.11b
Transmit power	18 dBm transmit power per chain (200 mW, combined 3-stream output power) at both HT20 and HT40 MCS0 data rate for both 2.4-GHz and 5-GHz 12 dBm transmit power per chain (50 mW, combined 3-stream output power) at both HT20 and HT40 MCS23 rate for both 2.4-GHz and 5-GHz

Table 5: 2.4-GHz Radio Receive Sensitivities

Planning Guidelines for Using RingMaster to Plan a Mobility System

The Juniper Networks Mobility System is an enterprise wireless LAN (WLAN) solution that seamlessly integrates with an existing wired enterprise network. The Mobility System provides secure connectivity to both wireless and wired users in large environments such as office buildings, hospitals, and university campuses.

If you are using RingMaster software to plan your Mobility System installation, we recommend that you create and verify a network plan for the entire installation and generate a wireless LAN access point (WLA) work order using RingMaster before installing the WLAs. A network plan and the WLA work order generated from RingMaster provide the following information about WLA installation and configuration:

- Number of WLAs required for adequate WLAN capacity in each coverage area
- Details of installation location for each WLA
- Settings for all WLAs in the WLAN

After you have created the plan and reviewed it, you can arrange for the WLAN installation. System administrators and anyone involved in the installation of the WLAN system are responsible for its proper setup and operation in accordance with all rules and regulations of the country in which the network equipment operates.

WLA Access Point Radio Frequency Exposure Guidelines

The following are radio frequency exposure guidelines for the WLA access points:

Wireless LAN Access Point (WLA) Radio Safety Advisories:

Federal Communications Commission (FCC) Docket 96-8 for Spread Spectrum Transmitters specifies a safety standard for human exposure to radio frequency electromagnetic energy emitted by FCC-certified equipment. When used with the proper antennas (shipped in the product), Juniper Networks WLA Series Access Point products meet the uncontrolled environmental limits found in OET-65 and ANSI C95.1-1991. Proper installation of the access point according to the instructions in this manual will result in user exposure that is below the FCC recommended limits.

802.11b/802.11g/BT警語：

第十二條→經型式認證合格之低功率射頻電機，非經許可，公司、商號或使用
者均不得擅自變更頻率、加大功率或變更原設計之特性及功能。

第十四條→低功率射頻電機之使用，得影響飛航安全及干擾合法通信；經發現
有干擾現象時，應立即停用，並改善至無干擾時方得繼續使用。

前項合法通信，指依電信法規定作業之無線電通信。

低功率射頻電機須忍受合法通信或工業、科學及醫療用電波射性電機設備之
干擾。

Article 12—Without permission granted by the NCC, any company, enterprise, or user is not allowed to change frequency, enhance transmitting power or alter original characteristics as well as performance of an approved low power radio-frequency device.

Article 14—The low power radio-frequency device shall not influence aircraft security and interfere legal communication; if such influence or interference is found, the user shall cease operating immediately until no interference is achieved. The said legal communications means radio communications are operated in compliance with the

Telecommunications Act. The low power radio-frequency devices must be susceptible with the interference from legal communications or ISM radio wave radiated devices.

802.11a警語：Unlicensed National Information Infrastructure, U-NII

4.7→無線傳輸設備(U-NII)

4.7.5→在5.25-5.35GHz頻帶內操作之無線資訊傳輸設備，限於室內使用。

4.7.6→無線資訊傳輸設備忍受合法通信之干擾且不得干擾合法通信；如造成干擾，應立即停用，俟無干擾之虞，始得繼續使用。

4.7.7→無線資訊傳輸設備的製造廠商應確保頻a?穩定性，如依製造廠商使用手冊上所述正常操作，發射的信號應維持於操作頻帶中。

加印警語→「避免電波干擾，本器材禁止於室外使用5.25-

5.35GHz頻帶」於器材使用說明書內，並將警語印製貼紙可黏貼於裝設器材機身外明處。

4.7.5—Within the 5.25–5.35-GHz band, U-NII devices will be restricted to indoor operations to reduce any potential for harmful interference to co-channel MSS operations.

4.7.6—The operation of the U-NII devices is subject to the condition that no harmful interference be caused. The user must stop operating the device immediately should harmful interference be caused by the operation of authorized communications, or ISM equipment, and shall not resume until the condition causing the harmful interference has been corrected.

4.7.7—Manufacturers of U-NII devices are responsible for ensuring frequency stability such that an emission is maintained within the band of operation under all conditions of normal operation as specified in the user manual.

B급 기기

(가정용 방송통신기자재)

이 기기는 가정용(B급) 전자파적합기기로서 주로 가정에서 사용하는 것을 목적으로 하며, 모든 지역에서 사용할 수 있습니다.

Translation: Class B (Broadcasting Communication Equipment for Home Use) As electromagnetic-wave equipment for home use (Class B), this equipment is intended mainly for home use and may be used in all areas of the home.

Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

This device complies with Part 15 of the Federal Communications Commission (FCC) Rules. Operation is subject to the following two conditions:

- This device must not cause harmful interference.
- This device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. This equipment generates, uses and can

radiate radio frequency energy and, if not installed and used in accordance with the manufacturer's instructions, may cause interference harmful to radio communications.

If this equipment does cause interference, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment to an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio or TV technician for help.

RF Radiation Exposure Statement: This equipment complies with FCC RF radiation exposure limits. This equipment should be installed and operated with a minimum distance of 20 cm between the radiator and your body for 2.4-GHz and 5-GHz operations. This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter. When operated in the 5.15 to 5.25-GHz frequency range, this device is restricted to indoor use to reduce the potential for harmful interference with co-channel mobile satellite systems.

Complies with the Class B limits for radio noise emissions as set out in the interference-causing equipment standard entitled "Digital Apparatus," ICES-003 of Industry Canada.

Cet appareil numérique de la classe B respecte toutes les exigences du Règlement sur le matériel brouilleur du Canada.

- [Radiation Patterns of Antennas for 2.4-GHz and 5-GHz Radios in the WLA532 Access Point on page 26](#)

Requirements and Specifications for 2.4-GHz Radios on WLA532 Access Points

The 2.4-GHz band radio is operational from channels 1 through 14 in legacy IEEE standard 802.11bg or in IEEE 802.11n 3x3 from single to three spatial streams of 20 MHz channel modes. At an MCS0 data rate, it provides 18 dBm transmit power per chain (200 mW, combined 3-stream output power) and has a receive sensitivity of -95 dBm. At an MCS23 data rate, it provides 12 dBm transmit power per chain (50 mW, combined 3-stream output power) and has a receive sensitivity of -75 dBm.

In the ceiling mount position, the WLA532 access point contains one vertically polarized and two horizontally polarized single band 2.4-GHz antennas with 5-degree down tilt on the antenna patterns with respect to the vertical axis and an omnidirectional pattern with respect to the horizontal axis. These polarity diversity antennas maximize the MIMO performance for the access point mounting positions.

- [Radiation Patterns of Antennas for 2.4-GHz and 5-GHz Radios in the WLA532 Access Point on page 26](#)

Requirements and Specifications for 5-GHz Radios on WLA532 Access Points

The 5-GHz band radio is operational from channels 36 through 165 in legacy IEEE standard 802.11a or IEEE 802.11n 3x3 from single to three spatial streams of 20 MHz and 40 MHz channel modes. At an MCS0 data rate, it provides 18 dBm transmit power per chain (200 mW, combined 3-stream output power) and has a receive sensitivity of -96 dBm (for 20 MHz) and -92 dBm (for 40 MHz). At an MCS23 data rate, it provides 12 dBm transmit

power per chain (50 mW, combined 3-stream output power) and has a receive sensitivity of -74 dBm (for 20 MHz) and -72 dBm (for 40 MHz).

In the ceiling mount position, the WLA532 access point contains one vertically polarized and two horizontally polarized single band 5-GHz antennas with 5-degree down tilt on the antenna patterns with respect to the vertical axis and an omnidirectional pattern with respect to the horizontal axis. These polarity diversity antennas maximize the MIMO performance for the access point mounting positions.

- [Radiation Patterns of Antennas for 2.4-GHz and 5-GHz Radios in the WLA532 Access Point on page 26](#)

Radiation Patterns of Antennas for 2.4-GHz and 5-GHz Radios in the WLA532 Access Point

The WLA532 access point has six internal, multiple input multiple output (MIMO) antennas, with three antennas for each of the access point's two radios. The antennas support spacial, polarity, and pattern diversity as well as cross-chain and cross-band isolations for maximum performance. The antennas provide a maximum gain of 3-dBi at 2.4-GHz throughput and 5-dBi at 5-GHz throughput.

This topic provides graphical depictions of radiation patterns for the internal antennas. The graphics display relative field strengths of signals transmitted from or received by the antennas. You can use this radiation pattern information to determine the distance between access point and client and also where to place the access points.

[Figure 3 on page 26](#) shows the locations of the six antennas. The antennas are numbered from 1 through 6.

Figure 3: Internal Antennas of the WLA532 Access Point

[Figure 4 on page 27](#) shows the horizontal-plane radiation pattern for the access point. The pattern provides 360-degree even coverage.

Figure 4: Horizontal-Plane Radiation Pattern (Omnidirectional) for a Ceiling-Mounted Access Point

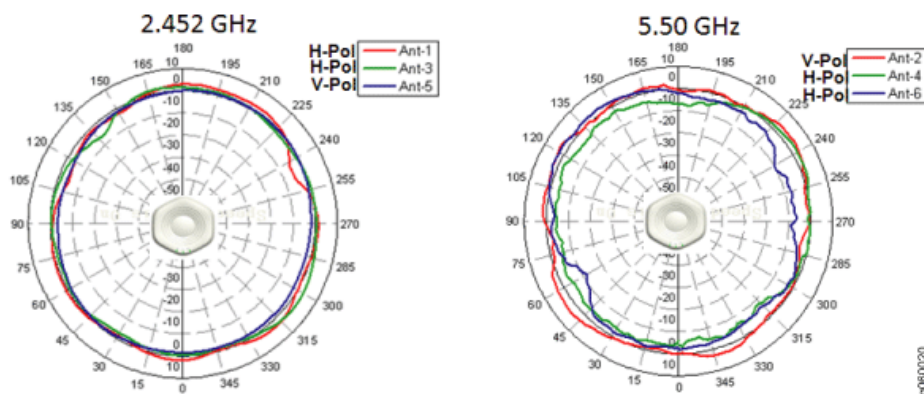

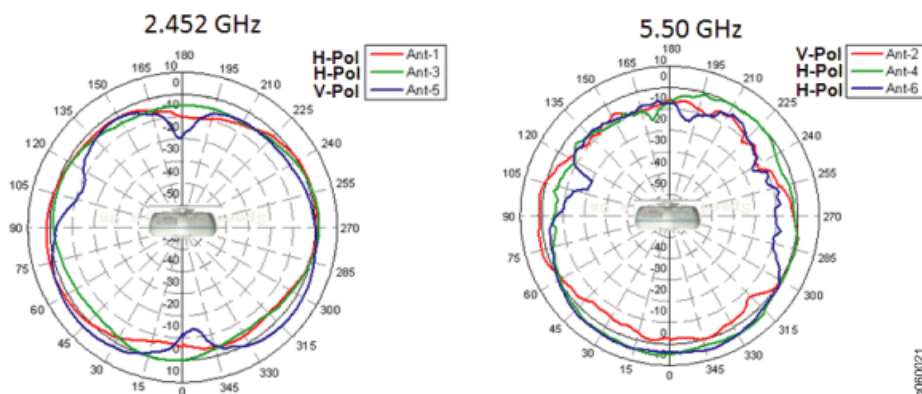

Figure 5 on page 27 shows the vertical-plane radiation pattern for the access point. The pattern provides maximum antenna gains along the outer edges of the access point, with a 5-degree downtilt.

Figure 5: Vertical-Plane Radiation Pattern (5-Degree Downtilt) for a Ceiling-Mounted Access Point

Installing and Connecting the Access Point

- Installing the WLA532 Access Point on a Suspended Ceiling Rail on page 33
- Installing the WLA532 Access Point on the Wall Using Hardware Kits on page 36
- Connecting the Access Point to Wireless LAN Controllers on page 48

Installing the WLA532 Access Point on a Suspended Ceiling Rail

You can install the WLA532 access point on the ceiling using the provided mounting bracket or on a junction box on a wall. Mounting the device on the ceiling is the primary installation method and ceiling-mount installation steps are provided in this topic. You can purchase a junction box wall-mount kit separately and follow the wall-mounting instructions in the Wireless LAN Services (WLS) documentation at <http://www.juniper.net/techpubs/>.

The WLA532 access point package includes a bracket for mounting the access point to a recessed, 9/16-inch or 15/16-inch T ceiling-tile rail.

Ensure that you have the following parts and tools available to install the access point:

- Ceiling-mount bracket (provided)
- Category 5 cable, installed (not provided)
- Mounting template (provided)
- Box cutter or similar tool to cut ceiling tiles (not provided)
- (Optional) Security kit, which includes a security tool and a security screw (The kit is not provided; you can order it separately.)

To install the access point on a suspended ceiling rail:

1. Select an installation location under a recessed rail in the ceiling.
2. Cut a hole as follows in the ceiling tile for the Category 5 cable:
 - a. Place the mounting template over the area where you will install the access point.
 - b. Use the box cutter or similar tool to cut along the line marking the opening for the port connectors.

- c. Remove the mounting template and the material you cut from the ceiling tile.
3. Run the Category 5 cable from the ceiling through the hole in the ceiling tile.
4. Ensure the snaps on the top of the ceiling-mount bracket are open so that the clips can fully extend to fit around the ceiling rail. The bracket is shipped in an open position so that it is ready to be clipped over a ceiling rail (see [Figure 6 on page 34](#)).

Figure 6: Opening the Ceiling Bracket Clips

5. If the bracket is closed, open the snaps by pressing in and up with your thumbs on both sides of the snaps on the bottom of the bracket (see [Figure 7 on page 34](#)) until it is fully open.

Figure 7: Opening the Ceiling Bracket Snaps

6. With the bracket clips fully extended, align the clips with the rail and hook the clips around the top sides of the rail. Push in on the sides of the bracket until the clips lock over the rail (see [Figure 8 on page 35](#)). Listen for a click that indicates that the clips

have locked. Be sure the bracket has locked securely onto the rail by gently pulling down on the bracket before installing the access point.

Figure 8: Locking the Bracket Clips Over the Rail

7. Plug in the Category 5 cable that extends from the ceiling into the access point.
8. Align the access point with the bracket and press forward (see [Figure 9 on page 35](#)) until the access point clicks into place. Be sure the access point is seated correctly in the bracket by gently pulling down on the access point.

Figure 9: Aligning the Access Point with the Ceiling Bracket

9. If the access point is not properly secured, press on the release button on the top of the bracket to unlock the access point (see [Figure 10 on page 36](#)). Realign the access point, making sure the cable is still connected, and push in until the access point clicks securely into place.

Figure 10: Releasing the Access Point

NOTE: We recommend that you use the optional security kit (separately orderable) to secure the access point. The kit includes a special tool and a security screw. Be sure that you retain the tool so that you can unlock and move the access point. Never use a power tool to insert or remove the security screw.

10. To lock the access point into place, secure the security screw in through the release button by using the tool provided with the security kit (see [Figure 11 on page 36](#)). Do not overtighten the screw.

Figure 11: Locking the Access Point onto the Ceiling Tile

Related Documentation

- [Installing the WLA532 Access Point on the Wall Using Hardware Kits on page 36](#)

Installing the WLA532 Access Point on the Wall Using Hardware Kits

The primary method of installing the WLA532 access point is mounting it on the ceiling; however, you can also install the access point on the wall by using one of three separately orderable wall-mount kits that can be purchased at <https://www.juniper.net/customers/support/>.

This topic covers installation of the WLA532 access point on three different wall-mount kits:

- [WLA-BRKT-WALL Wall-Mount Kit \(Faceplate and Wall-Mount Bracket Standard Hardware\)](#) on page 37
- [WLA-GNGWLBX-ADP-EU Kit \(European Faceplate Standard Hardware\)](#) on page 43
- [WLA-GNGWLBX-ADP-NA Kit \(North American Faceplate Standard Hardware\)](#) on page 44

WLA-BRKT-WALL Wall-Mount Kit (Faceplate and Wall-Mount Bracket Standard Hardware)

You can purchase the wall-mount WLA-BRKT-WALL kit (see [Figure 12 on page 37](#)) that includes a wall-mount bracket, a standard faceplate and two flat-tip, flat-head screws at <https://www.juniper.net/customers/support/>.

Figure 12: WLA-BRKT-WALL Kit (Wall-Mount Bracket Kit Hardware)

Ensure that you have the following parts and tools available to install the access point using the WLA-BRKT-WALL kit:

- Wall-mount bracket—See Figure 13 on page 38 and item a in Figure 12 on page 37 (provided in the WLA-BRKT-WALL kit)

NOTE: The wall-mount bracket extends the access point 1.5 inches from the wall to accommodate the Ethernet cable bend radius.

Figure 13: Wall-Mount Bracket Dimensions—WLA-BRKT-WALL

- Two flat-tip, flat-head screws—See item b in Figure 12 on page 37 (provided in the WLA-BRKT-WALL kit)
- Faceplate—See item c in Figure 12 on page 37 (provided in the WLA-BRKT-WALL kit)
- Flat-head screwdriver (not provided)
- Category 5 cable, installed (not provided)
- Two M3 or 6-32 wall anchors (not provided)
- Wall-mount template (part number 530-043682, provided in the WLA-BRKT-WALL kit)
- (Optional) Security kit, which includes a security tool and a security screw (The kit is not provided; you can order it separately at <https://www.juniper.net/customers/support/>.)

To install the access point on the wall:

1. Use the provided WLA532 wall-mount template to determine your anchor mounting location (see [Figure 14 on page 39](#)) and install the wall anchors (not included in the WLA-BRKT-WALL kit).

Figure 14: Use the Provided Template to Install Wall Anchors

2. Hold the wall-mount bracket centered over the wall anchors and pull the installed Category 5 cable through the wall-mount bracket (see [Figure 15 on page 40](#)).

Figure 15: Pull the Category 5 Cable Through the Wall Bracket

3. Install the bracket to the anchors using M3 or 6-32 wall anchors (see [Figure 16 on page 40](#)).

Figure 16: Use M3 or 6-32 Wall Anchors to Secure the Bracket to Anchors

4. Align the faceplate with the installed wall-mount bracket and secure the faceplate using the two provided flat-tip screws and the screwdriver (see [Figure 17 on page 41](#)).

Figure 17: Faceplate Secured to the Wall-Mount Bracket

5. Plug the Category 5 cable from the wall socket into the access point.
6. Align the access point with the bracket and push down on the access point until you hear it click into place (see [Figure 18 on page 41](#)). Be sure the device is seated correctly in the bracket by gently pulling up the access point and then pushing it down.

Figure 18: Align the Access Point with the Bracket and Push Down

7. If the access point is not properly secured, press the release button on the bottom of the bracket to release the device (see [Figure 19 on page 42](#)). Realign the unit, making sure the cable is still connected, and push down until the access point clicks securely into place.

Figure 19: Release the Access Point

NOTE: We recommend that you use the optional security kit (separately orderable) to secure the access point. The kit includes a special tool and a security screw. Be sure that you retain the tool so that you can unlock and move the access point. Never use a power tool to insert or remove the security screw.

8. To lock the access point into place, secure the security screw in through the release button by using the tool provided with the security kit (see [Figure 20 on page 42](#)). Do not overtighten the screw.

Figure 20: Secure the Access Point with the Security Screw and Tool

WLA-GNGWLBX-ADP-EU Kit (European Faceplate Standard Hardware)

You can purchase the wall-mount WLA-GNGWLBX-ADP-EU kit (see [Figure 21 on page 43](#)) that includes a European-standard faceplate and two M3 flat-head, flat-tip screws at <https://www.juniper.net/customers/support/>. The EU faceplate is meant to be installed directly onto an existing wall outlet box.

Figure 21: WLA-GNGWLBX-ADP-EU Kit (EU Faceplate Standard Hardware)

The EU faceplate included in the kit covers the wall box and cables and has a minimum extension plastic body that conforms to the EU faceplate standard (see [Figure 22 on page 43](#)).

Figure 22: EU Faceplate Dimensions

[Figure 22 on page 43](#) and [Figure 23 on page 44](#) show the dimensions of the installed WLA532 on the EU-standard faceplate in millimeters.

Figure 23: Dimensions of the Installed WLA532 Access Point on an EU-Standard Faceplate

To install the access point on the wall:

1. Hold the faceplate centered over the existing European standard outlet box that has an installed Category 5 cable.
2. Secure the faceplate to the outlet box using the two provided M3 flat-head, flat-tip screws and a screwdriver.
3. Plug the Category 5 cable from the outlet box into the access point.
4. Align the access point with the installed faceplate and push down on the access point until you hear it click into place. Be sure the device is seated correctly in the bracket by gently pulling up the access point and then pushing it down.
5. If the access point is not properly secured, press the release button on the bottom of the bracket to release the device. Realign the unit, making sure the cable is still connected, and push down until the access point clicks securely into place.

NOTE: We recommend that you use the optional security kit (separately orderable) to secure the access point. The kit includes a special tool and a security screw. Be sure that you retain the tool so that you can unlock and move the access point. Never use a power tool to insert or remove the security screw.

6. To lock the access point into place, secure the security screw in through the release button by using the tool provided with the security kit (see [Figure 20 on page 42](#)). Do not overtighten the screw.

WLA-GNGWLBX-ADP-NA Kit (North American Faceplate Standard Hardware)

You can purchase the wall-mount WLA-GNGWLBX-ADP-NA kit (see [Figure 24 on page 45](#)) that includes a North American (NA) standard faceplate and two 6-32 flat head, flat tip screws at <https://www.juniper.net/customers/support/>. The faceplate is meant to be installed onto an existing wall outlet box.

Figure 24: WLA-GNGWLBX-ADP-NA Kit (NA Faceplate Standard Hardware)

The NA faceplate included in the kit covers the wall box and cables and has a minimum extension plastic body that is meant to conform to the NA faceplate standard (see [Figure 25 on page 45](#)).

Figure 25: NA Wall-Mount Bracket Dimensions

To install the access point on the wall:

1. Hold the faceplate centered over an existing NA standard outlet box (see [Figure 26 on page 46](#)) that has an installed Category 5 cable.

Figure 26: NA Standard Outlet Box

2. Secure the faceplate to the outlet box using the two provided 6-32 flat-head, flat-tip screws and a screwdriver (see [Figure 27 on page 47](#)).

Figure 27: NA Faceplate Secured to the Outlet Box

3. Plug the Category 5 cable from the NA outlet box into the access point.
4. Align the access point with the installed faceplate and push down on the access point until you hear it click into place. Be sure the device is seated correctly in the bracket by gently pulling up the access point and then pushing it down.
5. If the access point is not properly secured, press the release button on the bottom of the bracket to release the device. Realign the unit, making sure the cable is still connected, and push down until the access point clicks securely into place.

NOTE: We recommend that you use the optional security kit (separately orderable) to secure the access point. The kit includes a special tool and a security screw. Be sure that you retain the tool so that you can unlock and move the access point. Never use a power tool to insert or remove the security screw.

6. To lock the access point into place, secure the security screw in through the release button by using the tool provided with the security kit (see [Figure 20 on page 42](#)). Do not overtighten the screw.

Connecting the Access Point to Wireless LAN Controllers

After you install the Wireless LAN Access Point, you can connect the access point to a wireless LAN controller (WLC) directly or indirectly through an intermediate Layer 2 or Layer 3 network.

To connect the access point directly to a controller or switch:

1. Insert one end of the installed Category 5 cable with a standard RJ-45 connector to the Ethernet port of the access point and the other end to Ethernet port of the controller. For connection to an access point, use a straight-through signaling cable.
2. Look at the access point LED for the port on the controller and verify that the link is activated.

The link is activated if the LED is green and glowing steadily.

To configure the access point connection, use the RingMaster GUI or the Mobility System Software CLI.

If you are installing the access point in a wireless LAN mesh or wireless bridge configuration, you must configure the access point before deploying the access point in the final location. For more information, see the [Mobility System Software Configuration Guide](#).

Verifying the Health of WLA Series Access Points Using LEDs

After you install the WLA Series access point and enable the Power over Ethernet (PoE) on the Ethernet cable connected to the access point, you can verify the access point status by observing the health LED. The health or STAT LED indicates whether the access point is operational.

- If the LED is green and glowing steadily, the access point has booted successfully by the wireless LAN controller (WLC) and is operational.
- If the LED is not steadily glowing green, contact the system administrator for the WLC.

Contacting JTAC Regarding WLA532 Access Point Parts

If you receive your WLA532 access point installation kit with any incorrect or damaged parts or if parts are missing from the kit, contact Juniper Networks at <http://www.juniper.net>. If possible, retain the carton, including the original packing materials. Use them to repack the product if you need to return it. Refer to the following checklist to ensure you have received a complete installation kit.

The WLA532 access point installation kit includes:

- One WLA532 access point
- One ceiling-mount bracket
- Mounting template
- *WLA532 Access Point Quick Start Guide*

NOTE: You can order a junction box wall-mount kit separately.
